DETAILED ACTION

The claims 1-21 are pending in the instant office action.

Restriction

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-8, drawn to methods of detection and quantification of proteins comprising HPLC/Mass spectrometry wherein the method also comprise protein chelate and linker group bound to solid support and use of an **enzyme** for cleavage.

Group II, claim(s) 1-8, drawn to methods of detection and quantification of proteins comprising HPLC/Mass spectrometry wherein the method also comprise protein chelate and linker group bound to solid support and use of **chemical** for cleavage.

Group III, claim(s) 9-18, 21 drawn to a reagent comprising protein, chelate and linker group having functional group capable of associating with solid support.

Group IV, claim 19, drawn to methods of detecting protein in biological sample using compound of group III.

Group V, Claim 20, drawn to method of diagnosing diseases in an animal by measuring expression of protein using the compound of group III.

The inventions listed as Groups I-V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Art Unit: 1652

Technical feature of group III is compound and technical features of group I-II and VI-V method steps. Compound of group III is used in the method step of group IV and V having different technical feature.

Methods in groups I-II and IV-V are different methods involve different steps for the processes result different utilities.

Furthermore, the technical feature Linking group I-VI appears to be that they all Relate to immobilized metal chelate bound to protein in the use of HPLC. This immobilized metal chelate bound to protein in the use of HPLC does not constitute a "special technical feature" as defined by PCT Rule 13.2, because it does not claim a feature, which defines a contribution over the prior art, as immobilized metal chelate bound to protein in the use of HPLC is known thorough (J. Chrom. 1999, 61-70, from IDS)).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
